(ytogenet, Cell Genet, 81:287-289(1998).

('tyogenet, Cell Genet, 81:287-289(1998).

-!- FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to requiste purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation.

-!- CATALTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-!- COPACTOR: Requires calcium and magnesium (By similarity).

-!- COPACTOR: Requires calcium: and magnesium (By similarity).

-!- SUBUNIT: Homodimer; disulfide-linked (By similarity).

-!- SUBCELULIAR LOCATION: Integral membrane protein (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                        MEDIANE=95015846; PubMed=7930580; Maliazewski C.R., Delespesse G.J.T., Schoenborn M.A., Armitage R.J., Fanslow W.C., Nakajima T., Baker E., Sutherland G.R., Poindexter K., Blirks C., Alpert A., Friend D., Gimpel S.D., Gayle R.B.                                                                                                                                                                    Neuropharmacology 36:1189-1200(1997).

-I-FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation.

Hydrolyzes ATP and ADP equally well.

-I-CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-I-COPACTOR: Requires calcium and magnesium.

-I-SUBGELLULAR LOCATION: Integral membrane protein (Potential).

-I-SUBGELLULAR LOCATION: Integral membrane protein and astrocytes, kidney, liver, muscle, thymus, lung and spleen.

-I-PTM: N-91ycosylated.

-I-SIMILARITY: Belongs to the GDAI / CD39 NTPase family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1. J. Paropring Miles 23115-33122 (1996).

1. J. Biol. Chem. 271:33116-33122 (1996).

1. FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

1. CATALYTIC ACTIVITY: ATP + 2 H(2)O = AMP + 2 phosphate.

1. CORACTOR: Requires calcium and magnesium (By similarity).

1. SUBNUT: Homodimer; disulfide-linked (By similarity).

1. SUBNUT: Homodimer; disulfide-linked (By similarity).

1. SUBNUT: Homodimer; Highest expression found in vascular endothelium, smooth muscle, spleen and lung.

1. PTM: Cleaved into two polypeptides that seem to stay together by noncovalent interactions.

2. Intransity: Belongs to the GDAI / CD39 NTPase family.
                                                                                                                                                                                       392 SKPWEEVKASYPTVKEKYLSEYCFSGTYILSLILQGYNFTGTSWDQIHFWGKIKDSNAGW

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           J. Biol. Chem. 271:33116-33122(1996).

-!- FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinegic neurotransmission. Could also implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-!- CATALYTIC ACTIVITY: ATP + 2 H(2)O = AMP + 2 phosphate.

-!- COFACTOR: Requires calcium and magnesium.

-!- SUBUNIT: Homodimer, dilfide-linked (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).

-!- SIMILARITY: Belongs to the GDA1 / CD39 NTPase family.

-i. FUNCTION: In the nervous system, could hydrolyze ATP and othe nucleotides to regulate purinesgic neurotransmission. Could a be implicated in the prevention of platelet aggregation.

Hydrolyzes ATP and ADP equally well (By similarity).

-i. CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-i. CORACTOR: Requires calcium and magnesium (By similarity).

-i. SUBUNIT: Homodimer; disulfide-linked (Probable).

-i. SUBCLULAR LOCATION: Integral membrane protein (Potential).

-i. PTM: N-glycosylated.

-i. SIMILARITY: Belongs to the GDAl / CD39 NTPase family.

The present sequence is a fusion protein construct CD39-L4-1, comprising the human CD39-L4 N-terminal region and soluble CD39 protein. CD39-L4 is a secreted apprase, belonging to the CD39 family. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet adgregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, mycocardial infarction, strok, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsis, embolism, platelet-associated ischaemic disorders including lung, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis coagulopathy, deep venous thrombosis (DVT), pulmonary composits (PDF) and transient ischaemic attack. Soluble CD39 is also useful cor preventing thrombus formation or reformation, occlusion, reocclusion, genenosis or testenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 YETNNQETFGALDLGGASTQVTFVPQNQTIESPDNALQFRLYGKDYNVYTHSFLCYGKDQ 260

The present sequence is a fusion construct of human soluble CD39 encoded by CD39-L4-1 construct. CD39-L4 is a secreted apyrase belonging to the CD39 family. The fusion construct is used for the expression and activity of soluble CD39 in CHO (chinese hamseter ovary) cells. Soluble CD39 cretains the capacity of wildtype CD39 to metabolise ArP and ADP at physiologically relevant concentrations as well as the ability to block and reverse ADP-induced platelet activation and recruitment including platelet aggregation. This is used in the treatment of unstable angina, choractelerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, thrombosis, intracardiac thrombosis, coagulopathy, deep venous thrombosis, thrombosis, thrombosis, coagulopathy, deep venous thrombosis (DT3), pulmonary embolism (PB), thrombosi formation or reformation, occlusion, reocclusion, stenosis or thrombosis of thrombosis of thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            peripheral artery thrombosis; coagulopathy; deep venous thrombosis; DVT; PE; pulmonary embolism; transient ischaemic attack; thrombus formation; occlusion; reocclusion; stenosis; restenosis; antianginal; cardiant;

The present sequence is a fusion protein construct CD39-L4-2/3, comprising the human CD39-L4 N-terminal region and soluble CD39 protein. CD39-L4 is a secreted apyrase, belonging to the CD39 family. Soluble CD39 is constructed by removal of N- and C-terminal transmembrane domains. It retains the capacity to metabolise AFP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, scrobe, coronary artery disease or injury, atherosolerosis, peripheral vascular occlusion, preeclampsia, coronary and cerebral schemaia, thrombosic disorders including lung, coronary and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary corpusating thrombuse formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

```
The present sequence is a fusion construct of human soluble CD39 encoded by CD39-L4-2 and CD39-L4-3 constructs. CD39-L4 is a secreted apyrase belonging to the CD39 family. The fusion construct is used for the expression and activity of soluble CD39 in CHO (chinese hamster ovary) cells. Soluble CD39 retains the capacity of wildtype CD39 to metabolise ATP and ADP at physiologically relevant concentrations as well as the ability to block and reverse ADP-induced platelet activation and recruitment including platelet aggregation. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preclampsia, embolism, platelet-associated ischaemia, a thrombosis, coronary artery thrombosis, creebral artery thrombosis, thrombosis, intracardiac thrombosis, peripheral artery thrombosis, venous thrombosis, intracardiac thrombosis, peripheral artery thrombosis, coronary actory thrombosis, creebral artery thrombosis, pulmonary embolism (PE), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reconsis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 6; Page 91-93; 118pp; English.

The present sequence is a fusion construct, comprising the N-terminal amino acids of mature human interleukin2 (IL2) and soluble CD39 (solCD39) region, that has apyrase activity. This results in high levels of solCD39 expression and activity in the transfected cells. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemic disorders including curonary, coronary and cerebral ischaemia, thrombotic disorders including coronary,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                315
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis (DVT), vulmonary embolism (PE) and transient isochaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SYCPYSQCAFNGIFLPPLQGDFGAFSAFYFVMKFLNLTSEKVSQEKVTEMMKKFCAQPWE 375

The present sequence is the protein encoded by a fusion construct of soluble)CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infarction, stroke, cornary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, thrombosis, intracardiac thrombosis, peripheral trery thrombosis, venous thrombosis, thrombosis, cerebral artery thrombosis, venous thrombosis, thrombosis, constructory thrombosis, between the peripheral artery thrombosis (by), pulmonary embolism (PB), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or

The present sequence is the fusion protein construct, pIL2LTrin4. This construct comprises of the leader peptide from human interleukin 2 (hIL2) and soluble CD39 (solCD39) protein region, having apyrase activity.

Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting myocardial infarction, coronary attery disease or injury, embolism, atherosclerosis, peripheral vascular occlusion, preeclampsia, platelet ischaemia, thrombotic disorders including lung, coronary and cerebral ischaemic disorders including coronary, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         375

Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. SolCD39 is used in the treatment of unstable angina, myocardial infarction, atroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombotic disorder including coronary artery thrombosis, cerebral artery thrombosis, intraacardiac thrombosis, peripheral artery thrombosis, thrombosis, caredial partery thrombosis, thrombosis, caredial artery thrombosis, thrombosis, cannot ischaemic attery thrombosis (DVI), pulmonary embolism (PB), transient ischaemic attack.
                                                                                                                                                                                                                                                                                unstable angina; myocardial infarction; stroke; coronary artery disease, atherosclerosis; peripheral vascular occlusion; preeclampsia; embolism; platelet-asfociated ischaemic disorder; lung ischaemia; thrombolytic; cerebral ischaemia; thrombolic disorder; long ischaemia; thrombolis; cerebral artery thrombosis; intracardiac thrombosis; peripheral artery thrombosis; coagulopathy; deep venous thrombosis; peripheral artery thrombosis; cagulopathy; deep venous thrombosis; ps; pullmonary embolism; transient ischaemic attack; thrombos formation; occlusion; reocclusion; stenosis; restenosis; antianginal; cardiant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Inhibiting platelet activation and recruitment, useful for treating a mammal suffering from unstable angina, myocardial infarction, stroke, coronary artery disease or injury, comprises administering soluble CD39 polypeptides.
                                                                                                                                                                                                                                                                  CD39; ADP-induced platelet activation; platelet aggregation;
                                                                                                                                                                                                                                                                                                                                                                                                                        cerebroprotective; antiarteriosclerotic; vasotropic; anticoagulant;
                                                                                                                                                                                                                                                                                                                                                                                                                                      coronary ischaemia; vascular occlusion; pIL2Trim4 variant

                                                                                                                                                                                                                                                                                                The present sequence is the fusion protein construct, pIL2LTrim3. This and soluble CD39 (solcD39) protein region, having apyrase activity. Soluble CD39 (solcD39) protein region, having apyrase activity. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, stroke, myocardial infarction, coronary artery disease or injury, embolism, atherosclerosis, peripheral vascular occlusion, preeclampsia, platelet associated ischaemic disorders including lung, coronary and cerebral

The present sequence is the protein encoded by Trim3 construct. pIL2Trim3 variant was constructed by removing the human IL2 residues from solCD39 thision construct. Pusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. SolCD39 stroke, coronary artery disease or injury, atheroscatial infarction, stroke, coronary artery disease or injury, atheroscalerosis, peripheral disorder including lung ischaemia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombosic disorder including coronary artery thrombosis, intracardiac thrombosis, peripheral artery
Soluble CD39; ADP-induced platelet activation; platelet aggregation; unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preclampsia; embolism; platelet-associated ischaemic disorder; lung ischaemia; thrombotic; cerebral ischaemia; thrombotic disorder; lung ischaemia; thrombosis; cerebral artery thrombosis; intracardiac thrombosis; anous thrombosis; peripheral artery thrombosis; coagulopathy; deep venous thrombosis; peripheral artery thrombosis; coagulopathy; deep venous thrombosis; DVT-PE; pulmonary embolism; transient ischaemic attack; thrombus formation; ceclusion; reocclusion; etenosis; restenosis; antianginal; cardiant; cerebroprotective; antiatteriosclerotic; vasotropic; anticoagulant; coronary ischaemia; vascular occlusion; plL2Trim3 variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inhibiting platelet activation and recruitment, useful for treating a mammal suffering from unstable angina, myocardial infarction, stroke, coronary artery disease or injury, comprises administering soluble CD39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24. .25

The present sequence is a fusion construct pIL21solCD39, comprising the leader peptide of human interleukin 2 (hIL2), 12 amino acids from the mature N-terminus of hiz2 and soluble CD39 (solCD39) coding region.

CC meature N-terminus of hiz2 and soluble CD39 is ocding region.

CC having apyrase activity. This produces high levels of solCD39 expression and activity in the transfected cells. Soluble CD39 is constructed by comparing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and comparing platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angins, myocardial infarction, stroke, coronary artery disease cor injury, atherosclerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemia, thrombotic disorders including lung, coronary and cerebral ischaemia, thrombotic disorders including lung, thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PB) and transient ischaemia etteck. Soluble CD39 is also useful cor preventing thrombos formation or reformation, occlusion, reocclusion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New soluble CD39 polypeptides having apyrase activity, useful for inhibiting angiogenesis and treating unstable angina, myocardial infarction, stroke, coronary artery disease or injury.

pilisolocols, agence construct encoding sol (soluble) CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human LL2 to the solcD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atheroscelerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemic disorder thrombotic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombotic disorder including coronary artery thrombosis, cerebral artery thrombosis, thrombosis, coagulopathy, deep venous thrombosis (DVT); transient ischaemic attack. Soluble CD39 is also useful for preventing thrombos formation or reformation, occlusion, recoclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    217
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             337

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the fusion protein construct, IgkappaLsolCD39.

This construct comprises of the leader peptide from human immunoglobulin Igkappa, linked to the soluble CD39 (solCD39) protein region by few residues defived from human interleukin 2 (hIL2). SolCD39 has apyrase activity and is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP transmembrane domains. It retains the ability to block and reverse ADP- induced platelet activation and recruitment, including platelet aggracian. Soluble CD39 polypeptides are useful for inhibiting aggregation. Soluble CD39 polypeptides are useful for inhibiting myocardial infarction, coronary artery disease or injury, embolism, atherosclerosis, peripheral vascular occlusion, preeclampsia, plateletisescociated ischaemic disorders including lung, coronary and cerebral ischaemia, thrombotic disorders including coronary, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis,

                                                                                                                                                                                                                                                                                                       Ke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                      The present sequence is the protein encoded by IgkappalsolCD39 construct. This is used for transient expression of soluble (sol)CD39 in recombinant cells for determining enzymatic activity and platelet inhibitory activity for each protein product. SolCD39 is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, platelet-associated infarction, troke, coronary artery disease or injury, platelet-associated ischaemia, coronary platelet-associated ischaemia, thrombocic disorder including lung ischaemia, coronary artery thrombosis, cerebral artery thrombosis, thrombosis, peripheral artery thrombosis, thrombosis, peripheral artery thrombosis, thrombosis, transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LSNYPFDFQGARIITGQEEGAYGWITINYLLGKFSQKTRWFSIVPYETNNQETFGALDLG 195

The present sequence is the fusion protein construct, pII2ITrim1. This construct comprises of the leader peptide from human interleukin 2 (hII2) and soluble CD39 (solCD39) protein region, having apyrase activity. The two regions are joined by an intervaning has residue. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides recruitment, including platelet aggregation. Soluble CD39 polypeptides resustable angina, stroke, myocardial infarction, coronary artery disease or injury, embolism, atherosclerosis, peripheral vascular occlusion, preciampsia, platelet associated ischaemic disorders including coronary, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PR) and transient ischaemic attack. Soluble CD39 is also useful coronary and create and reansient eschaemic attack. Soluble CD39 is also useful
                                                                   Soluble CD39; solCD39; human; apyrase activity; platelet activation; unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preclampsia; embolism; platelet-associated ischaemic disorder; thrombotic disorder; reocclusion; coagulopathy; deep venous thrombosis; bull monary embolism; pE; thrombus formation; occlusion; restenosis; angiogenesis; antianginal; cerebroprotective; antiarteriosclerotic; anticoagulant; cardiant; vasotropic; thrombolytic; inhibitor; interleukin 2; IL2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New soluble CD39 polypeptides having apyrase activity, useful for inhibiting angiogenesis and treating unstable angina, myocardial infarction, stroke, coronary artery disease or injury.
                                                                                                                                                                                                                                                                                                                                                              from human interleukin 2 (hIL2)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 2353; DB 3; Length 464;
